
AIRTEK WATER COOLED AFTERCOOLERS

As the leader in the manufacturing of heat exchangers for industrial refrigeration and fluids, Parker Airtek's fixed tube water cooled after coolers are no exception for our unending dedication to quality. All water cooled after coolers are manufactured in our Lancaster, NY manufacturing facility. Being the producer, we are capable of providing coolers to meet customer specific demands. Standard materials of construction are carbon steel shell with copper tubes. We can also produce models using stainless steel materials, corrosion allowance on vessels, low pressure drop designs and more. Parker Airtek heat exchangers are manufactured in accordance with ASME section VIII and all vessel 6" diameter and larger are provided with a 'U' Stamp. CRN approved exchangers to meet Canadian Provincial requirements are available.
