

Compressed Air Systems

One of Many Systems Offered

Fabricated System on Location

24 / 7 / 365 Service

Thinking “*My Compressed Air System runs so why worry?*” means you’re likely wasting up to 50% or more in energy costs. To maintain and improve peak system performance and cut operating costs, it’s essential to analyze the system’s supply and demand sides, evaluate components, and regularly maintain the system. That’s Pumps & Service’s ‘Total System Performance’ approach.

AUTHORIZED DISTRIBUTOR

Sullair | Samuel Pressure Vessels | AIRpipe USA
Alwitco | RTI | Sauer

CUSTOM PACKAGES

- 5HP – 500HP systems
- Turnkey—ready to use
- Fabricated buildings to protect compressor systems for operation in harsh environments

WHY PUMPS & SERVICE

- Indoor and outdoor packages
- ASME, AGA & API standards
- Factory trained technicians to service and maintain compressors, electronics, dryers, and vacuum systems from multiple manufacturers

AIR SYSTEM AUDIT

The U.S. Department of Energy determined that on average, up to 50% or more of the \$40,000 a year in energy it takes to run one 100HP air compressor is wasted.

- 95% of companies reduce system costs after audits
- Review entire compressed air system to to:
 - maximize efficiency
 - reduce waste
 - lower energy, maintenance, and equipment costs
- Provides most accurate data on current system conditions
- Audits meet U.S. Department of Energy standards

FIELD SERVICE & MAINTENANCE

- 24 / 7 / 365 emergency service
- Factory trained service technicians
- Genuine OEM parts
- Planned maintenance agreements

We don't just supply compressed air systems. We help deliver system efficiency & cost savings.
